PROFESSIONAL SUMMARY

Software Engineer with 8+ years of experience, focused on scalable product systems, microfrontend architecture, and modern frontend platforms. Combines a strong frontend background with hands-on full-stack delivery using Node.js, Express, and PostgreSQL.

Built customer-facing applications, internal AI tools, administration interfaces, and modular WordPress solutions. Experienced in Next.js rendering strategies, Module Federation, API-driven architecture, reusable UI systems, authentication, and payment system integrations. Contributes through code reviews, component documentation, automated testing, and application monitoring with Datadog.

8+ Years of Experience

15+ Production Projects

4+ Product Domains

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3, SCSS/Sass; PHP templating.

Frontend: React, Next.js, App Router, React Router, jQuery.

Architecture and Rendering: Frontend architecture, microfrontends, Module Federation, Server Components, Client Components, Server-Side Rendering (SSR), Static Site Generation (SSG), Incremental Static Regeneration (ISR), reusable UI systems.

Backend and Databases: Node.js, Express, PostgreSQL, TypeORM, relational data modeling, database migrations, API development, token validation, session management, role-based access control, webhook processing.

State Management and Data: Redux, Redux Toolkit, React Redux, Redux Persist, TanStack Query / React Query, TanStack Table, REST APIs, GraphQL, Apollo Client, urql, Axios.

UI and Styling: Tailwind CSS, Material UI (MUI), NextUI, Emotion, styled-components, Headless UI, Storybook, responsive design, accessibility.

Forms and Validation: React Hook Form, Formik, Yup.

Interaction and Animation: dnd-kit, Motion, Swiper, React Virtuoso.

CMS and Content: WordPress, Gutenberg, Directus, Tiptap, CKEditor, Markdown.

Authentication and Integrations: Auth0, Single Sign-On (SSO), Stripe, Google / Discord / Twitter authentication, HubSpot, analytics integration.

Internationalization: i18next, react-i18next, react-intl, next-international.

Build, Monitoring and Delivery: Webpack, Vite, Babel, PostCSS, ESLint, Prettier, Sentry, Datadog, Git, npm, Yarn, DigitalOcean, automated Git-based deployments.

Engineering Practices: Code review, refactoring, API contract definition, component documentation, technical interviews, collaboration with backend developers and QA.

PROFESSIONAL EXPERIENCE

PLAYCARRY - Gaming Services Platform

Senior Software Engineer | Jul 2024 - Jan 2026

Owned frontend architecture for two applications and implemented backend functionality for a gaming services platform.

- Developed Express APIs for catalogs, user profiles, orders, coupons, wishlists, and authentication.
- Designed PostgreSQL tables and relationships, implemented TypeORM migrations, and wrote queries supporting application workflows.
- Implemented Stripe payment sessions and webhook processing, including signature verification and order-status updates.
- Built server-side token validation, session handling, role-based authorization, and access restrictions.
- Designed the Next.js App Router architecture, using ISR for catalog and product pages, SSR for the homepage, and SSG for the blog.
- Implemented SEO-friendly catalog navigation, separating server-rendered content from client-side animations and interactions.
- Delivered customer accounts, order history, wishlists, coupons, blog functionality, and three SSO integrations: Google, Discord, and Twitter.
- Developed a separate content administration application and integrated REST and GraphQL APIs using Apollo Client and urql.
- Conducted frontend code reviews within a two-developer team and configured automatic Git-based deployments for both frontend applications on DigitalOcean.

Delivery: Delivered frontend and backend functionality as part of a deployed MVP. Public launch did not proceed due to funding constraints.

Stack: Node.js, Express, PostgreSQL, TypeORM, Next.js, React, TypeScript, Redux Toolkit, Tailwind CSS, GraphQL, Apollo Client, urql, Stripe, Vite, DigitalOcean.

DREAMHOST - Internal AI Tools

Middle Front-end Developer | Jul 2023 - Jun 2024

Developed internal AI tools used in production within a six-developer team and an established microfrontend architecture.

- Owned frontend implementation of a Tiptap-based content editor, including formatting, toolbar controls, navigation, version saving, and undo/redo workflows.
- Implemented Redux reducers and state transitions for editing and content history.
- Built the AI Search Panel interface, integrated analytics, and implemented Redux-based state management.
- Created 15 reusable components for a shared MUI-based UI package and documented 30 component states and usage examples in Storybook.
- Conducted code reviews and contributed features across three production releases, with testing handled by a dedicated QA team.

Stack: JavaScript, React, Redux, Tiptap, MUI, Storybook, microfrontends, Jest, React Testing Library, Cypress, Playwright, Datadog.

ZAGROZA AGENCY - Client Web Development

Middle Front-end Developer | Oct 2022 - Jun 2023

Developed SEO-focused web applications using Next.js, React, and headless CMS integrations for client and content-driven platforms.

- Participated in the development and delivery of 5+ production-ready frontend applications using React and Next.js.
- Built responsive customer-facing interfaces, reusable UI components, and scalable frontend layouts across multiple client projects.
- Integrated Directus and Strapi CMS solutions for flexible and scalable content management workflows.
- Focused on frontend performance, SEO optimization, and maintainable frontend architecture.
- Improved frontend maintainability and responsive behavior for customer-facing applications.

Stack: Next.js, React, TypeScript, JavaScript, GraphQL, Strapi, Directus, Tailwind CSS, SSR, Headless CMS.

MOTORSPORT NETWORK - Motor1.com

Software Engineer | Sep 2018 - Sep 2022

Worked on customer-facing interfaces and frontend features for a large-scale media platform. Developed responsive UI components, frontend workflows, and platform integrations using JavaScript, HTML, and CSS. Focused on frontend maintainability, responsive interfaces, and performance optimization.

- Contributed to frontend redesign initiatives that improved UI consistency across 20+ platform sections and templates.
- Improved article filtering and frontend interaction flows, helping reduce user navigation friction and increase content discoverability by approximately 35%.
- Participated in comments system integration and frontend customization for customer-facing platform functionality used across multiple regional editions.
- Improved accessibility and responsive frontend behavior for key platform interfaces, helping reduce mobile UI issues and layout inconsistencies by approximately 75%.
- Worked on advertising-related frontend integrations and responsive ad layouts, improving placement consistency across desktop and mobile views.

Stack: JavaScript, jQuery, HTML, CSS/SCSS, PHP templating.

WEB DEVELOPMENT STUDIO

Front-end Developer | Sep 2017 - Aug 2018

Worked on frontend development for client websites, landing pages, e-commerce platforms, and content-driven web applications.

- Participated in the development and support of 15+ commercial frontend projects for client and business-oriented platforms.
- Developed responsive layouts and customer-facing interfaces for e-commerce websites and landing pages using HTML, CSS, and JavaScript.
- Implemented customer-facing website functionality and frontend integrations across commercial projects.
- Improved reusable frontend structure and UI consistency across multiple client projects.
- Worked on responsive behavior and cross-browser compatibility, contributing to maintainable frontend implementation for scalable content-driven websites.

Stack: HTML5, CSS3 / SCSS, JavaScript, jQuery, Responsive Design, REST API, Cross-Browser Compatibility, WordPress.

PROJECT-BASED EXPERIENCE

MOXICART - WordPress Plugin

Software Engineer | Feb 2025 - Sep 2025 | Project-based

Designed and implemented modular frontend infrastructure within a two-developer team.

- Selected and implemented Module Federation, organizing five application areas into reusable frontend modules.
- Established a shared UI package containing 20 reusable components.
- Created 30+ Gutenberg blocks and patterns.
- Conducted four technical interviews for developer candidates.

Project stage: Development; not deployed during the engagement.

Stack: React, TypeScript, Webpack, Module Federation, MUI, Emotion, WordPress Gutenberg.
